

Technical details about JonDonym

Trust gained through indepenence, responsibility and knowledge

JonDonym servers are operated by independent entities committed to protecting your data. Because these operators are independent from each other, no single organization has complete information about you. Your anonymity thereby gets fully protected, unlike alternatives like (Web-)Proxies and VPNs, which are typically controlled by a single party and can be easily exploited thereby. In many cases, these parties, their background and their intent are unknown.

Global distribution across countries and oceans

When you surf the web your requests travel across different relay points before serving the web page. Like an Internet provider, each of these relay points can monitor your entire data traffic on its way towards its destination, e.g. a website or an e-mail service. By analyzing this data, the relay points may completely deanonymize typical VPN services and (web-) proxies which only have only one single server location. But with JonDonym, you are protected! Each of JonDonym's premium services consists of several servers in several different countries as well as their operators. It would require international cooperation between countries or operator organizations for your information to be revealed.

High speed surfing

JonDonym's premium services are as fast as VPN services and as the fastest (Web-) proxies, and up to 100 times faster than comparable services like Tor. JonDonym - Surf, no lag, guaranteed!

Secure browsing

Your browser can become a gateway for malicious software, spyware, and viruses designed to harm your PC and your privacy. (Web-) proxies and VPN- services offer no protection against bad software and can be easily exploited. The JonDoFox browser profile is JonDonym's solution to protect your anonymity and your PC.

Browse, Chat, E-Mail... Anonymously

Other anonymization services like web proxies often restrict your Internet access to web surfing. JonDonym introduces new possibilities making you invisible on the internet like anonymous chats or e-mail.

Protect against web profiling

JonDonym strengthens your anonymity by applying a special technique. Every request is anonymized separately so tracking your web habits is impossible. JonDonym does not create a constant link between you and the JonDonym network exit point. This technique proves JonDonym is in a league of its own.

No data retention

Many proxy and VPN services store personal user data, including your IP addresses and maybe your surfing behaviour. JonDonym guarantees you nothing about you is stored.

Anonymity, the vision..

Most other anonymity services deploy standard technologies which have been designed for providing encryption, but not anonymity. They thereby fail to fully protect you. For this reason, an experienced research team stands behind JonDonym technologies which cooperates with universities and searches tirelessly for new solutions to provide you the best in anonymity.
